

WHAT IS *THE* CLOUD?

Google Cloud

Digital Ocean

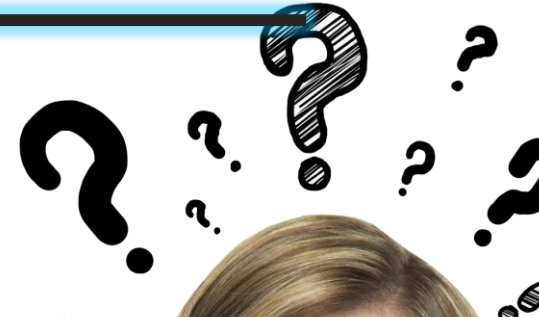

linode

ORACLE
CLOUD PLATFORM

Azure

What is the **Cloud**?

- ✓ **The cloud = using computers over the internet**
- ✓ You don't own the computers
- ✓ You access them anytime, anywhere

NETFLIX

What is the Cloud Used For?

What Do We Use the Cloud For?

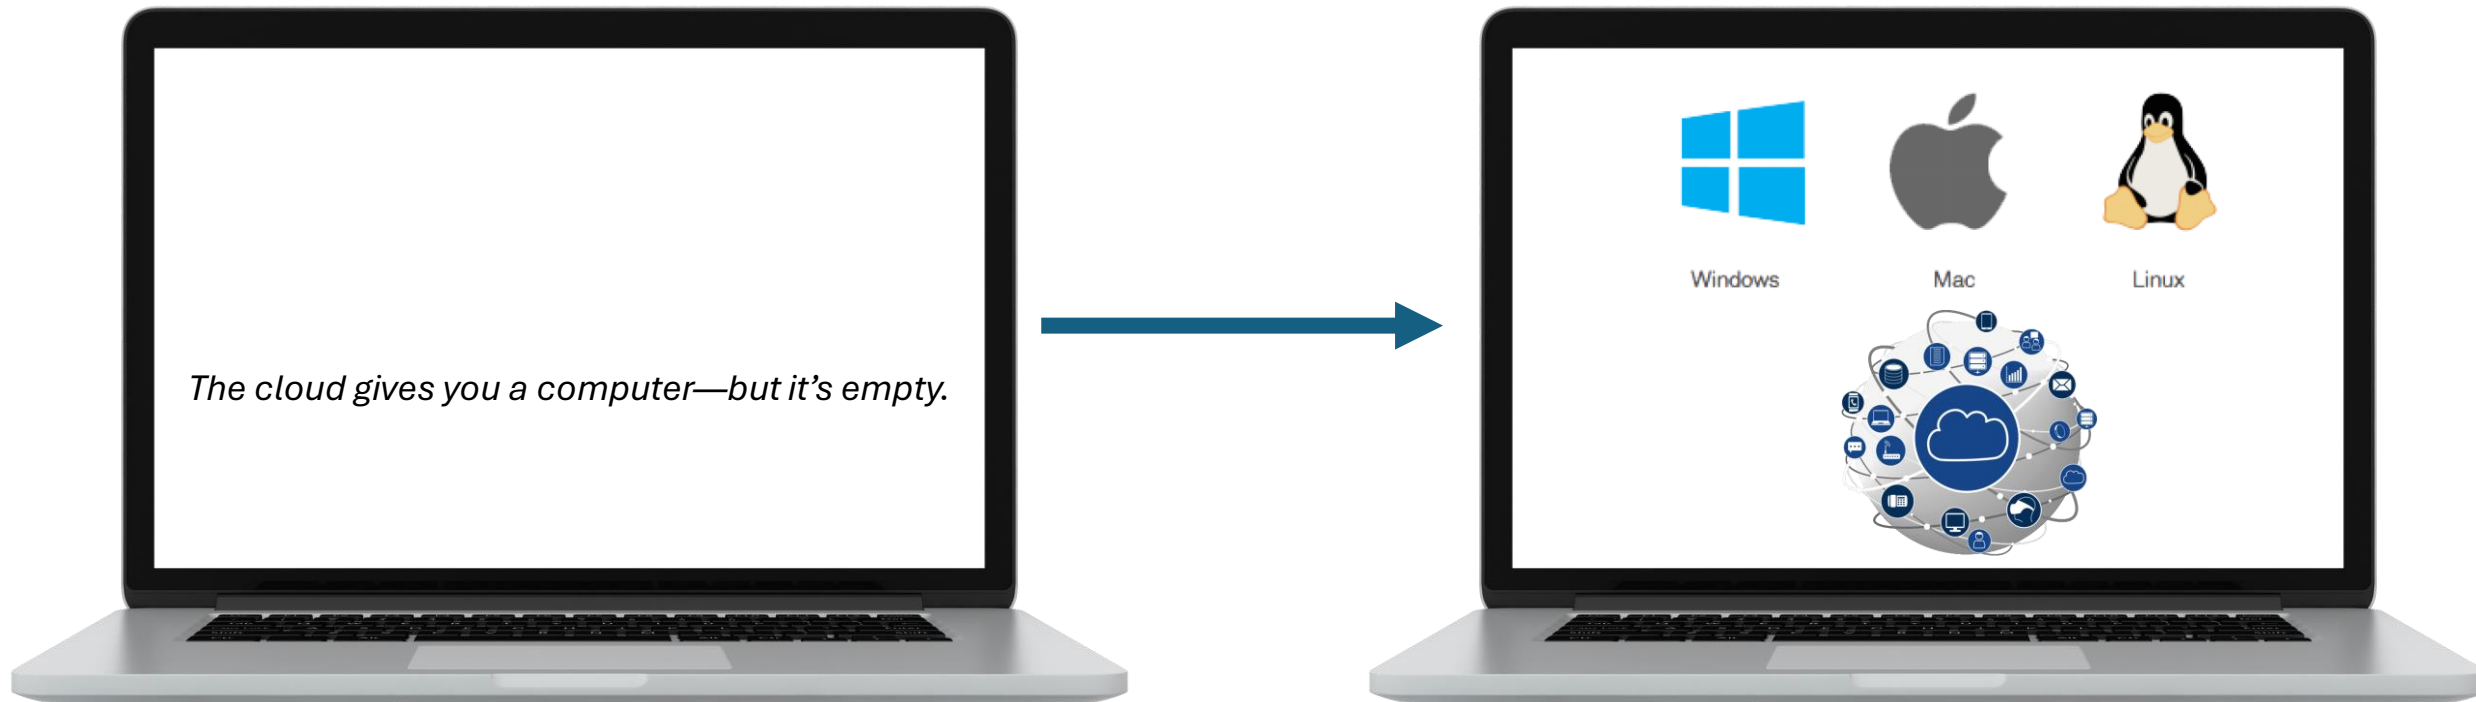

- Running websites
- Storing data (photos, videos, files)
- Building and running apps
- Renting powerful computers
- Handling large number of users

Types of Cloud Computing

- IaaS (Infrastructure as a Service)
- PaaS (Platform as a Service)
- SaaS (Software as a Service)

Understanding **IaaS** (Very Real Example)

- ❖ You get a virtual computer
- ❖ You install and manage everything
- ❖ Full control, more responsibility

Understanding **PaaS** (Tools Are Ready)

- ❖ System is already set up
- ❖ You focus on building
- ❖ Less work, less control

Everything is ready — you just come and build.

Understanding **SaaS** (Tools Are Ready)

No setup

No building

Just use the software

No control, no setup—just use it.

Who Manages What

- **On-Premises** → You manage everything
- **IaaS** → Provider handles hardware
- **PaaS** → Provider handles system + tools
- **SaaS** → Provider handles everything

One-Line Summary

IaaS → "Give me the computer"

PaaS → "Give me the tools"

SaaS → "Give me the app"

That's
Cloud Computing,
simplified.
